Channel4.com doesn't support the Channel 4 Live Simulcast on Macs. There are a number of reasons for this. One of the most important reasons is that the native Mac format (Quicktime) does not support Digital Rights Management (DRM). DRM is a system for controlling licensing of copyrighted material. You can tell if a video has DRM content if you see a message acquiring license before it starts to play. Some of our content is licensed to Channel 4 on the understanding that it will be protected in this way.

The Channel 4 Live Simulcast uses DRM, and therefore is only viewable on a PC.

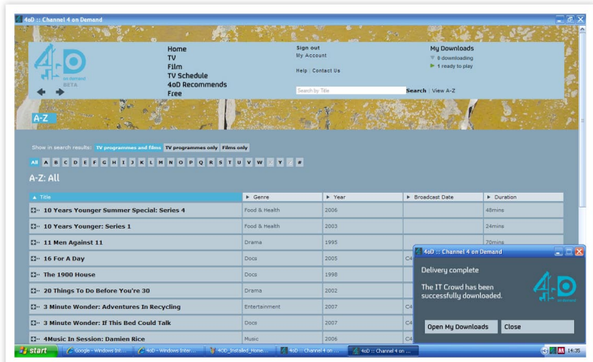
Channel 4 (4oD)

Technology: Kontik, Windows (Download)



Comments: 16/12/07

Mac compatibility: This is an industry-wide issue caused because the accepted Digital Rights Management (DRM) system used to protect online video content, which is required by C4's content owners,is not compatible with Apple Mac hardware and software. The closed DRM system used by Apple is not currently available for licence by third parties and there is no other Mac-compatible DRM solution which meets the protection requirements of content owners. Unfortunately, C4 are therefore unable to offer 4oD content to Mac users at this stage.
